The Fly 2:

Rollout, Policy Iteration, and Distributed Reinforcement Learning Dimitri Bertsekas, 2021-08-20 The purpose of this book is to develop in greater depth some of the methods from the author's Reinforcement Learning and Optimal Control recently published textbook Athena Scientific 2019 In particular we present new research relating to systems involving multiple agents partitioned architectures and distributed asynchronous computation We pay special attention to the contexts of dynamic programming policy iteration and control theory model predictive control We also discuss in some detail the application of the methodology to challenging discrete combinatorial optimization problems such as routing scheduling assignment and mixed integer programming including the use of neural network approximations within these contexts The book focuses on the fundamental idea of policy iteration i e start from some policy and successively generate one or more improved policies If just one improved policy is generated this is called rollout which based on broad and consistent computational experience appears to be one of the most versatile and reliable of all reinforcement learning methods In this book rollout algorithms are developed for both discrete deterministic and stochastic DP problems and the development of distributed implementations in both multiagent and multiprocessor settings aiming to take advantage of parallelism Approximate policy iteration is more ambitious than rollout but it is a strictly off line method and it is generally far more computationally intensive This motivates the use of parallel and distributed computation One of the purposes of the monograph is to discuss distributed possibly asynchronous methods that relate to rollout and policy iteration both in the context of an exact and an approximate implementation involving neural networks or other approximation architectures Much of the new research is inspired by the remarkable AlphaZero chess program where policy iteration value and policy networks approximate lookahead minimization and parallel computation all play an important role [New York Magazine](#), 1986-09-01 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country With award winning writing and photography covering everything from politics and food to theater and fashion the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself while celebrating New York as both a place and an idea **New York Magazine**, 1986-09-08 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country With award winning writing and photography covering everything from politics and food to theater and fashion the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself while celebrating New York as both a place and an idea **New York Magazine**, 1986-09-08 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country With award winning writing and photography covering everything from politics and food to theater and fashion the magazine's consistent mission
