Math Circle by the Bay Laura Givental, Maria Nemirovskaya, Ilya Zakharevich, 2018-12-14 This book is based on selected topics that the authors taught in math circles for elementary school students at the University of California Berkeley Stanford University Dominican University Marin County CA and the University of Oregon Eugene It is intended for people who are already running a math circle or who are thinking about organizing one It can be used by parents to help their motivated math loving kids or by elementary school teachers We also hope that bright fourth or fifth graders will be able to read this book on their own The main features of this book are the logical sequence of the problems the description of class reactions and the hints given to kids when they get stuck This book tries to keep the balance between two goals inspire readers to invent their own original approaches while being detailed enough to work as a fallback in case the teacher needs to prepare a lesson on short notice It introduces kids to combinatorics Fibonacci numbers Pascal's triangle and the notion of area among other things The authors chose topics with deep mathematical context These topics are just as engaging and entertaining to children as typical recreational math problems but they can be developed deeper and to more advanced levels In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession

Do Plants Know Math? Stéphane Douady, Jacques Dumais, Christophe Golé, Nancy Pick, 2024-09-24 A breathtakingly illustrated look at botanical spirals and the scientists who puzzled over them Charles Darwin was driven to distraction by plant spirals growing so exasperated that he once begged a friend to explain the mystery if you wish to save me from a miserable death The legendary naturalist was hardly alone in feeling tormented by these patterns Plant spirals captured the gaze of Leonardo da Vinci and became Alan Turing's final obsession This book tells the stories of the physicists mathematicians and biologists who found themselves magnetically drawn to Fibonacci spirals in plants seeking an answer to why these beautiful and seductive patterns occur in botanical forms as diverse as pine cones cabbages and sunflowers Do Plants Know Math takes you down through the centuries to explore how great minds have been captivated and mystified by Fibonacci patterns in nature It presents a powerful new geometrical solution little known outside of scientific circles that sheds light on why regular and irregular spiral patterns occur Along the way the book discusses related plant geometries such as fractals and the fascinating way that leaves are folded inside of buds Your neurons will crackle as you begin to see the connections This book will inspire you to look at botanical patterns and the natural world itself with new eyes Featuring hundreds of gorgeous color images Do Plants Know Math includes a dozen creative hands on activities and even spiral plant recipes encouraging readers to explore and celebrate these beguiling patterns for themselves

Mathematics Of Life Ian Stewart, 2011-04-07 A new partnership of biologists and mathematicians is picking apart the hidden complexity of animals and plants to throw fresh light on the

behaviour of entire organisms how they interact and how changes in biological diversity affect the planet's ecological balance Mathematics offers new and sometimes startling perspectives on evolution and how patterns of inheritance and population work out over time scales ranging from millions to hundreds of years as well as what's going on to change us right now Ian Stewart in characteristically clear and entertaining fashion explores these and a whole range of pertinent issues including how far genes control behaviour and the nature of life itself He shows how far mathematicians and biologists are succeeding in tackling some of the most difficult scientific problems the human race has ever confronted and where their research is currently taking us
