The Art Of Distributed Applicationsprogramming Techniques For Remote Procedure Calls:

The Art of Distributed Applications John R. Corbin,2012-12-06 Powerful networked workstations are adding a new dimension to the world of computing Programmers are challenged to write applications that exploit the speed and parallelism of such distributed systems programs that take advantage of the networking and communication features of high speed workstations John Corbin a senior engineer in Sun s networking group bases his approach on RPC Remote Procedure Call a technique for programming communication processes in UNIX environments A professional reference book as well as a textbook on RPC programming techniques The Art of Distributed Applications Programming Techniques for Remote Procedure Call is for the working programmer who needs to explore the possibilities of designing distributed networked applications under UNIX The book can also be recommended as a supplemental text in a distributed systems course providing the basis for lab assignments **Proceedings of the 14th International Conference on Distributed Computing Systems** IEEE Computer Society. TC on Distributed Processing,1994 The proceedings of ICDCS 13 comprise 74 papers in the areas of distributed system architecture and shared memory distributed operating systems distributed databases and information systems distributed system services and management distributed applications and cooperative work communication arc *UNIX System V Network Programming* Stephen A. Rago,1993-03-31 Finally with UNIX System V Network Programming an authoritative reference is available for programmers and system architects interested in building networked and distributed applications for UNIX System V Even if you currently use a different version of the UNIX system such as the latest release of 4 3BSD or SunOS this book is valuable to you because it is centered around UNIX System V Release 4 the version of the UNIX system that unified many of the divergent UNIX implementations For those professionals new to networking and UNIX system programming two introductory chapters are provided The author then presents the programming interfaces most important to building communication software in System V including STREAMS the Transport Layer Interface library Sockets and Remote Procedure Calls So that your designs are not limited to user level the author also explains how to write kernel level communication software including STREAMS drivers modules and multiplexors Many examples are provided including an Ethernet driver and a transport level multiplexing driver In the final chapter the author brings the material from previous chapters together presenting the design of a SLIP communication package

High-Performance Computing in Biomedical Research Theo C. Pilkington,Bruce Loftis,Thomas Palmer,Thomas F. Budinger,1992-09-24 Leading researchers have contributed state of the art chapters to this overview of high performance computing in biomedical research The book includes over 30 pages of color illustrations Some of the important topics featured in the book include the following Component-Based Software Testing with UML Hans-Gerhard Gross,2005 Component based software development regards software construction in terms of conventional engineering disciplines where the assembly of systems from readily available prefabricated parts is the norm Because both component based

systems themselves and the stakeholders in component based development projects are different from traditional software systems component based testing also needs to deviate from traditional software testing approaches Gross first describes the specific challenges related to component based testing like the lack of internal knowledge of a component or the usage of a component in diverse contexts He argues that only built in contract testing a test organization for component based applications founded on building test artifacts directly into components can prevent catastrophic failures like the one that caused the now famous ARIANE 5 crash in 1996 Since building testing into components has implications for component development built in contract testing is integrated with and made to complement a model driven development method Here UML models are used to derive the testing architecture for an application the testing interfaces and the component testers The method also provides a process and guidelines for modeling and developing these artifacts This book is the first comprehensive treatment of the intricacies of testing component based software systems With its strong modeling background it appeals to researchers and graduate students specializing in component based software engineering Professionals architecting and developing component based systems will profit from the UML based methodology and the implementation hints based on the XUnit and JUnit frameworks *Environmental Software Systems* Ralf Denzer,Gerald Schimak,D.W. Russell,2013-06-05 Due to increasing practical needs software support of environmental protection and research tasks is growing in importance and scope Software systems help to monitor basic data to maintain and process relevant environmental information to analyze gathered information and to carry out decision processes which often have to take into account complex alternatives with various side effects Therefore software is an important tool for the environmental domain When the first software systems in the environmental domain grew 10 to 15 years ag users and developers were not really aware of the complexity these systems are carrying with themselves complexity with respect to entities tasks and procedures I guess nobody may have figured out at that time that the environmental domain would ask for solutions which information science would not be able to provide and in several cases can not provide until today Therefore environmental informatics as we call it today is also an important domain of computer science itself because practical solutions need to deal with very complex interdisciplinary distributed integrated sometimes badly defined user centered decision processes I doubt somebody will state that we are already capable of building such integrated systems for end users for reasonable cost on a broad range The development of the first scientific community for environmental informatics started around 1985 in Germany becoming a technical committee and working group of the German Computer Society in 1987 Proceedings of 1994 IEEE Region 10's Ninth Annual International Conference Tony K. Y. Chan,1994 Distributed Computing Amjad Umar,1993 This book explores both the technical and management aspects of distributed computing focusing on interrelationships interfaces and integration covers rapidly advancing fields such as network client server systems distributed databases distributed transaction processing distributed operating systems distributed applications and open

system standards provides different levels of discussion in each section for different audiences conceptual overviews management summaries trends and technical details includes a real life case study which is developed throughout the book
