

4 reasons data should be portable

Resiliency

If data can move among cloud providers, it remains accessible even if one cloud has an issue.

Avoiding vendor lock-in

Mobile data means customers don't have to commit to a single provider because it offers better data services.

Cost

Mobility lets customers take advantage of cheaper tiers of storage from among various cloud service providers.

Exploiting cheap compute

Portable data lets customers take advantage of discounts compute providers offer at certain times of day.

TRON Project 1990 Ken Sakamura,2012-12-06 I wish to extend my warm greetings to you all on behalf of the TRON Association on this occasion of the Seventh International TRON Project Symposium The TRON Project was proposed by Dr Ken Sakamura of the University of Tokyo with the aim of designing a new

comprehensive computer architecture that is open to worldwide use. Already more than six years have passed since the project was put in motion. The TRON Association is now made up of over 140 companies and organizations including 25 overseas firms or their affiliates. A basic goal of TRON Project activities is to offer the world a human-oriented computer culture that will lead to a richer and more fulfilling life for people throughout the world. It is our desire to bring to reality a new order in the world of computers based on design concepts that consider the needs of human beings first of all and to enable people to enjoy the full benefits of these computers in their daily life. Thanks to the efforts of Association members in recent months a number of TRON specification 32-bit microprocessors have been made available. ITRON specification products are continuing to appear and we are now seeing commercial implementations of BTRON specifications as well. The CTRON subproject meanwhile is promoting standardization through validation testing and a portability experiment and products are being marketed by several firms. This is truly a year in which the TRON Project has reached the practical implementation stage.

The conferences on software engineering were held under the auspices of the NATO Science Committee as part of its continuing effort to promote the useful progress of science through international cooperation. These conferences are deliberately designed and structured to focus expert attention on what is not known. The participants are carefully selected to bring together a variety of complementary viewpoints. This book examines shortcomings in software practice and technique and suggests alternatives that could overcome many of the problems. It lays out the frame of mind applicable to the production of dependable software. The conclusions and recommendations for further research were reached through intensive discussion presented here for use by the scientific community.
