Surface Modification and Mechanisms George E. Totten, Hong Liang, 2004-04-30 Navigating through an extensive compilation of surface modification reactions and processes for specific tribological results this reference compiles detailed studies many not found in other texts on various residual stresses reaction processes and mechanisms heat treatment methods plasma based techniques laser impingement nanometer scale surface modification and more Surface Modification and Mechanisms Friction Stress and Reaction Engineering offers guidelines for the consideration and design of wear and frictional performance and provides a unique understanding of surface structural changes that occur during various engineering procedures

Surface Modification Engineering: Fundamental aspects, 1989 **Surface Modeling Engineering** Ram Kossowsky, 1989-07-31 These volumes present the general practitioners in engineering with a comprehensive discussion of technological surfaces their interactions with environments and the various modification techniques available to improve their performance In each subject applications to metals ceramics and polymers are emphasized The interactions with the environment are described corrosion chemical friction and water mechanical and bioreactivity physiological Reviews of major modification schemes such as chemical vapor deposition physical vapor deposition laser beam interactions chemical infusion and ion implantation are presented In summary reviews of applications of the modification techniques to optimize the performances of structural components tools electronic devices and implantable medical devices manufactured out of metals ceramic and polymers are described

Surface Engineering R. Kossowsky, S.C. Singhal, 2012-12-06 Over the last few years there has been increasing need for systematic and strategically designed experiments of surface morphology evolution resulting from ion bombardment induced sputtering Although there is an impressive number of investigations 1 concerned with semiconductor materials as a result of immediate applications the most systematic investigations have been conducted with fcc metals with particular interest on single crystal Cu 2 3 Evidence now exists that within certain parameters i.e. ion species Ar ion energy 20-44 KeV substrate 2 temperature 80-550 K dose rate 100-500 $\mu\text{A}/\text{cm}^2$ residual x 5-9 pressure 5-10 to 5x10 mm Hg and polar and azimuthal angle of ion incidence 4 reproducible surface morphology etch pits and pyramids is achieved on the 111 specific crystallographic orientation The temporal development of individual surface features was also observed in this later study 4 by employing an in situ ion source in the scanning electron microscope at Salford a technique also employed in studies of the influence of polar angle of ion incidence 5 and surface contaminants 6 on the topography of Ar bombarded Si Studies have also been made on the variation of incident ion species with the 111 Cu surface and it was fully recognized 7 that residual surface contaminants when present could play a major role in dictating the morphological evolution
