

HOW BLOCKCHAIN WORKS

Next, a block representing the transaction is created on the platform.

A node initiates a transaction and signs it with its private key.

The transaction is broadcasted to the peers within the network based on any preset criteria.

The peer nodes then validate the transaction.

The block gets added to the ledger and links itself to the previous block. When a new block arrives after it, the new block cryptographically links back itself to this block.

After validation, it's included in the block. At this point, the transaction is confirmed.

HOW DOES BLOCKCHAIN CONSENSUS WORK

Using consensus algorithms, nodes within a network can agree whether a transaction is valid or not. There's a lot of consensus algorithms, and each algorithm works differently than one another.

Blockchain can work without cryptocurrency. In fact, a lot of blockchain projects are now moving towards token or crypto less ecosystem such as Hyperledger.

CAN BLOCKCHAIN WORK WITHOUT CRYPTOCURRENCY?

HOW DOES BLOCKCHAIN AUTHENTICATION WORK

A node requests for authentication, and a verifier node verifies whether the requester is authenticated to join the network or not.

The requester retrieves the RSA public key of the verifier.

Next, the requester encrypts its blockchain address with the RSA public key and sends it to the verifier.

The verifier will use its RSA private key to decrypt the blockchain address.

Next, the verifier uses the blockchain address to retrieve the requester's RSA public key.

The requester uses its own RSA private key to decrypt the hash and signs it with its private key.

The verifier then sends the encrypted hash to the requester.

Verifier then generates a random string, hash and timestamp and encrypts it with the requester's RSA public key.

Next, the requester encrypts an envelope containing the digital signature, the signed hash, and their blockchain address and sends it to the verifier.

The verifier then decrypts it with its private key and verifies whether the signature is valid or not.

Once the signature verifies the requester is permitted to enter the network.

 Crypto 92 took place on August 16-20 1992 It was the twelfth in the series of annual cryptology conferences held on the
 beautiful campus of the University of California Santa Barbara Once again it was sponsored by the International Association
 for Cryptologic Research in cooperation with the IEEE Computer Society Technical Committee on Security and Privacy The
 conference ran smoothly due to the diligent efforts of the general chair Spyros Magliveras of the University of Nebraska One of
 the measures of the success of this series of conferences is represented by the ever increasing number of papers submitted
 This year there were 135 submissions to the conference which represents a new record Following the practice of recent
 program committees the papers received anonymous review The program committee accepted 38 papers for presentation In
 addition there were two invited presentations one by Miles Smid on the Digital Signature Standard and one by Mike Fellows
 on presenting the concepts of cryptology to elementary age students These proceedings contain these 40 papers plus 3
 papers that were presented at the Rump Session I would like to thank all of the authors of the submitted papers and all of the
