Technology Cad Systems Computational Microelectronics:

Technology CAD Systems Franz Fasching, Stefan Halama, Siegfried Selberherr, 2012-12-06 As the cost of developing new semiconductor technology at ever higher bit gate densities continues to grow the value of using accurate TCAD simulation tools for design and development becomes more and more of a necessity to compete in today's business. The ability to tradeoff wafer starts in an advanced piloting facility for simulation analysis and optimization utilizing a virtual fab SW tool set is a clear economical asset for any semiconductor development company. Consequently development of more sophisticated accurate physics based and easy to use device and process modeling tools will receive continuing attention over the coming years. The cost of maintaining and paying for one's own internal modeling tool development effort however has caused many semiconductor development companies to consider replacing some or all of their internal tool development effort with the purchase of vendor modeling tools. While some notably larger companies have insisted on maintaining their own internal modeling tool development organization others have elected to depend totally on the tools offered by the TCAD vendors and have consequently reduced their modeling staffs to a bare minimal support function. Others are seeking to combine the best of their internally developed tool suite with robust proven tools provided by the vendors hoping to achieve a certain synergy as well as savings through this approach. In the following sections we describe IBM's internally developed suite of TCAD modeling tools and show several applications of the use of these tools.

Future Trends in Microelectronics S. Luryi, Jimmy Xu, Alex Zaslavsky, 2012-12-06 Silicon technology has developed along virtually one single line reducing the minimal size of lithographic features But has this taken us to the point of diminishing returns Are we now at a turning point in the logical evolution of microelectronics Some believe that the semiconductor microelectronics industry has matured the research game is over comparisons with the steel industry are being made Others believe that qualitative progress in hardware technology will come roaring back based on innovative research This debate spirited as it is is reflected in the pages of Future Trends in Microelectronics where such questions are discussed What kind of research does the silicon industry need to continue its expansion What is the technical limit to shrinking Si devices Is there any economic sense in pursuing this limit What are the most attractive applications of optoelectronic hybrid systems Are there any green pastures beyond the traditional semiconductor technologies Identifying the scenario for the future evolution of microelectronics will present a tremendous opportunity for constructive action today
