Realtimerepublishers.com, 2005 *Spyware* John S. Yang, 2005 The term spyware is not well defined Generally it is used to refer to any software that is downloaded onto a person s computer without their knowledge Spyware may collect information about a computer user s activities and transmit that information to someone else It may change computer settings or cause pop up advertisements to appear in that context it is called adware Spyware may redirect a Web browser to a site different from what the user intended to visit or change the user s home page A type of spyware called keylogging software records individual keystrokes even if the author modifies or deletes what was written or if the characters do not appear on the monitor Thus passwords credit card numbers and other personally identifiable information may be captured and relayed to

unauthorised recipients Some of these software programs have legitimate applications the computer user wants They obtain the moniker spyware when they are installed surreptitiously or perform additional functions of which the user is unaware Users typically do not realise that spyware is on their computer They may have unknowingly downloaded it from the Internet by clicking within a website or it might have been included in an attachment to an electronic mail message e mail or embedded in other software According to a survey and tests conducted by America Online and the National Cyber Security Alliance 80% of computers in the test group were infected by spyware or adware and 89% of the users of those computers were unaware of it The Federal Trade Commission FTC issued a consumer alert on spyware in October 2004 It provided a list of warning signs that might indicate that a computer is infected with spyware and advice on what to do if it is This new book helps shed light on this insidious nightmare created by members of the human race to wreck havoc on the remainder
