WEB SEARCH GARAGE

Tara Calishain
Co-author of Google Hacks

Web Search Garage

Elizabeth Eisner Reding

Web Search Garage:

Google Sarah Milstein, Rael Dornfest, 2004 Google is the planet's most popular program for finding stuff on the Web but it has no manual. As it turns out, Google has many hidden tricks and tools that can turn simple searching into powerful and successful discoveries. *Google: The Missing Manual* is a friendly desk-side companion brimming with tips for getting more out of the world's favorite search program. 0 596 00613 6 19 95 O'Reilly Associates [Google Power Search](#) Stephan Spencer, 2011-07-16 Behind Google's deceptively simple interface is immense power for both market and competitive research if you know how to use it well. Sure, basic searches are easy, but complex searches require specialized skills. This concise book takes you through the full range of Google's powerful search refinement features so you can quickly find the specific information you need. Learn techniques ranging from simple Boolean logic to URL parameters and other advanced tools and see how they're applied to real-world market research examples. Incorporate advanced search operators such as filetype, intitle, daterange, and others into your queries. Use Google filtering tools including Search Within Results, Similar Pages, and SafeSearch among others. Explore the breadth of Google through auxiliary search services like Google News, Google Books, Google Blog Search, and Google Scholar. Acquire advanced Google skills that result in more effective search engine optimization (SEO). **Efficient Information Searching on the Web** Jonas Fransson, 2010-05 Information searching on the Web has become part of our everyday life. *Efficient Information Searching on the Web* deals with different aspects which are important to become a better searcher. To search for information is one of the most common occupations on the Web. We do it for work, for studies, and in our spare time. We search for information about illnesses, far-away countries, or spare parts for the car. The Web is an important source of information, no matter if you are a journalist, a student, a university researcher, or a teacher. Everybody can become more effective when it comes to searching for information. Central matters of the book are: How does a search engine work? How may the search services be used more efficiently? What is the invisible Web? How can the information be managed once it is found? [Information Trapping](#) Tara Calishain, 2006-12-07 How many times have you run a Google search that resulted in thousands of results? With over 8 billion pages online and more posted every day, the Web more than likely contains the information you're looking for if only you could find it. In *Information Trapping: Real Time Research on the Web*, Internet search engine expert Tara Calishain makes researching more efficient and rewarding for anyone for whom the Web is an indispensable tool: academics, journalists, scientists, and professionals, as well as bloggers, genealogists, and hobbyists. She does so by teaching the latest techniques for building automated information gathering systems. As an alternative to the typical one-time search for information, Tara demonstrates how readers can use RSS feeds, page monitoring tools, and other software to set up information streams of many different data types, from text to multimedia to conversations, for capture and review. *Web Research* Marie L. Radford, Susan B. Barnes, Linda Robinson Barr, 2006 *Web Research: Selecting, Evaluating, and Citing* provides helpful tips on how to find, select, and cite information.
