Excerpt from *The Theatre of Tomorrow* No movement in the theatre has ever been simple enough for the purposes of the pigeonhole Giants like Hugo and Ibsen may serve as expressions of the romantic and the realistic movements of the nineteenth century But they have acquired stature through the passage of time and about them in their own day stood playwrights actors and producers now forgotten from whom and to whom impulse owed in the web of contemporary effort The new stagecraft has its giant Gordon Craig a giant who will grow greater in as poet as he and his contemporaries fade into the past Yet it would be a reckless critic who would lay upon Craig alone the origination of a movement which sprang up in imperfect form at half a dozen points in Europe during the years before and after 1900 About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Features Anna Kibort,Greville G. Corbett,2010-08-19 This book presents a critical overview of current work on linguistic features and establishes new bases for their use in the study and understanding of language Features are fundamental components of linguistic description they include gender feminine masculine neuter number singular plural dual person 1st 2nd 3rd tense present past future and case nominative accusative genitive ergative Despite their ubiquity and centrality in linguistic description much remains to be discovered about them there is for example no readily available inventory showing which features are found in which of the world s languages there is no consensus about how they operate across different components of language and there is no certainty about how they interact This book seeks at once to highlight and to tackle these problems It brings together perspectives from phonology to formal syntax and semantics expounding the use of linguistic features in typology computer applications and logic Linguists representing different standpoints spell out clearly the assumptions they bring to different kinds of feature and describe how they use them Their contrasting contributions highlight the areas of difference and the common ground between their perspectives The book brings together original work by leading international scholars It will appeal to linguists of all theoretical persuasions **The New Republic** Herbert David Croly,1922 *Coordination and Subordination* Sandra Pereira,Clara Pinto,Fernanda Pratas,2016-06-22 Recent studies on the syntax and semantics of complex sentences have dealt with several challenges to the traditional boundaries between coordination and subordination Some constructions belong to one of the two types according to syntactic criteria but relate to the other type on semantic grounds whereas other constructions are not compatible with either the canonical syntactic or semantic tests traditionally employed to establish this distinction Other constructions by contrast seem to have evolved in such a way that they now cross the divide between both types The collection of papers in this volume delves further into the theoretical implications of previous analyses and focuses on a wide array of data from different languages taking those challenges as a point of departure to develop innovative perspectives and to advance thought provoking ideas
