management in diabetes type II patients living at home and supported by telemonitoring equipment has proven to be both working and useful while adding health value from a clinical perspective Managerial decisions need however to be based on quantified cost estimations The challenge today is to show in which patient groups positive cost benefit results can be obtained by the use of telemedicine equipment The problem statement While numerous studies have shown clinical value and economical benefit separately there is a need to identify the cost benefit ratios applicable to different diabetic patient groups with varying risk levels The investment costs in expensive telemonitoring equipment need to be compared to associated clinical benefits obtained in the medium and long term timeframe The interest relevance and importance of the study lays in the cost estimating of care interventions provided to diabetes patient following care pathways in home care settings While similar work has been undertaken in the acute care settings with start end pathways the cost estimation of the diabetes follow up is challenged by a recurring loop back care pathway Aims and hypothesis While it is assumed that the use of telemedicine equipment and related care intervention costs are compensated by a reduction in complications and related health care costs the aim of the study is to provide a simple model for cost benefit analysis Methods Workload evaluation methods are used to cost estimate and cost quantify identified care pathway variables The resulting cost information is then used as input data in a simple microsimulation model Microsimulation is designed to identify the target group of instable diabetic patients for whom the use of telemedicine supported monitoring would produce both clinical added value and be cost effectiveness as compared to the conventional care delivery model Results The microsimulation model is producing a breakeven point cost benefit levels reached over determined periods of time thus identifying parameters about which patient profiles can be cost beneficially used for the telemedicine modality **New Scientist** ,2008 *Indian Economy and Socio-economic Transformation* S.
