Memory is more than a good memory it is the means whereby we perform the largest share of our mental work In the building of character and individuality the memory plays an important part for upon the strength of the impressions received and the firmness with which they are retained depends the fiber of character and individuality Our experiences are indeed the stepping stones to greater attainments and at the same time our guides and protectors from danger If the memory serves us well in this respect we are saved the pain of repeating the mistakes of the past and may also profit by remembering and thus avoiding the mistakes of others The cultivation of the memory is far more than the cultivation and development of a single mental faculty it is the cultivation and development of our entire mental being the development of our selves To many persons the words memory recollection and remembrance have the same meaning but there is a great difference in the exact shade of meaning of each term The student of this book should make the distinction between the terms for by so doing he will be better able to grasp the various points of advice and instruction herein given Let us examine these terms Locke in his celebrated work the Essay Concerning Human Understanding has clearly stated the difference between the meaning of these several terms He says Memory is the power to revive again in our minds those ideas which after imprinting have disappeared or have been laid aside out of sight when an idea again recurs without the operation of the like object on the external sensory it is remembrance if it be sought after by the mind and with pain and endeavor found and brought again into view it is recollection But the New Psychology makes a little different distinction from that of Locke as given above It uses the word memory not only in his sense of The power to revive etc but also in the sense of the activities of the mind which tend to receive and store away the various impressions of the senses and the ideas conceived by the mind to the end that they may be reproduced voluntarily or involuntarily thereafter The New Psychology goes much further than this While pointing out the most improved and scientific methods for re collecting the impressions and ideas of the memory it also instructs the student in the use of the proper methods whereby the memory may be stored with clear and distinct impressions which will thereafter flow naturally and involuntarily into the field of consciousness when the mind is thinking upon the associated

subject or line of thought and which may also be re collected by a voluntary effort with far less expenditure of energy than under the old methods and systems You will see this idea carried out in detail as we progress with the various stages of the subject in this work You will see that the first thing to do is to find something to remember then to impress that thing clearly and distinctly upon the receptive tablets of the memory then to exercise the remembrance in the direction of bringing out the stored away facts of the memory then to acquire the scientific methods of recollecting special items of memory that may be necessary at some special time This is the natural method in memory cultivation as opposed to the artificial systems that you will find mentioned in another chapter It is not only development of the memory but also development of the mind itself in several of its regions and phases of activity It is not merely a method of recollecting but also a method of correct seeing thinking and remembering
