Environmental Protection Agency. Library Systems Branch,1974      The Architecture of Green Economic Policies P.K. Rao,2010-06-14 After numerous scientific papers and books on most aspects of climate change and the design of pro environmental policies including some that suit some industrial lobby or another is there relevance for another book and what is the purported role of this one Is this yet another academic exercise or much ado about nothing Do we have to bother designing green economic policies and incur transaction costs of this effort Are there shortcomings of existing policies if we care to live happily on this planet Is it not enough to care for the current generations so that the future generations can take care of themselves or even be given the incentives for innovations for lack of fully provided resources What can we do about the green economic policies and what are these anyway What trade offs if any are relevant in foregoing some benefits and in incurring some costs not all of which can be expressed in monetary units What are the overarching objectives and priorities in the current context What economic and other approaches are relevant for attaining the objectives These are some of the questions the author reflected in writing this book      Catalogue Harvard University. Graduate School of Design. Library,1974      **The Ecological Transition** John W. Bennett,2017-09-29 Written during the height of the ecology movement *The Ecological Transition* is a stunning interdisciplinary work It combines anthropology ecology and sociology to formulate an understanding of cultural environmental relationships While anthropologists have been studying relationships between humans and the physical environment for a very long time only in the last thirty years have questions inherent in these relationships broadened beyond description and classification For example the concept of environment has been extended beyond the physical into the social Although anthropologists have adopted many of the concepts that Bennett develops in the book he also feels that the central issues have never been addressed either by anthropologists or by people in related disciplines The most important of these in Bennett's opinion is the failure to incorporate a respect for the environment in contemporary culture which would allow making exceptions in certain human practices in order to protect the environment His point in *The Ecological Transition* is that a basic cultural change in modern civilization is necessary to achieve this end Both a theoretical and a practical work *The Ecological Transition* emphasizes the relationships between human culture the physical environment technology and social policy *The Ecological Transition* is a challenging volume that makes us face the consequences of human behavior in the modern world
