**World Fish Farming: Cultivation and Economics** E. Brown, 2012-12-06 Until the First Edition of World Fish Farming Cultivation and Economics was published several years ago there was little or no economic and technical information on commercial aquaculture either by countries or by species I tried at that time to partially fill the gap in the literature In this Second Edition I have updated data originally presented and increased the scope by adding new countries New trout data have been added for 10 western European countries sections on cost of production of food sized catfish and fingerlings in the USA new and improved chapters for Japan Hungary Indonesia the Philippines and the United Kingdom and completely new chapters pertaining to Poland Thailand and Czechoslovakia have all been added to this edition The book now includes 31 countries including all major producing ones Between 5.5 and 6.0 million metric tons of finfish shrimp and crayfish cultured production are represented which accounts for about 90% of the world's total The People's Republic of China and the USSR as well as countries on the continents of Europe Asia North America and Oceania are represented Because of only minimal reported cultured fish production in Africa and South America these continents have been omitted Also according to information received from New Zealand there is no culturing of fish in that country other than for restocking of public waters More than 100 species of cultured fish seven species of shrimp and prawns and six species of crayfish are discussed

Handbook on European Fish Farming Ergün Demir, 2020-01-16 Aquaculture is one of the fastest ways to produce animal protein for growing population in the World Aquaculture is the art science and business of producing aquatic plants and animals useful to humans Fish farming is an ancient practice and dates back as far as 2500 BC In Europe fish raised in ponds became a common source of food during the Middle Ages Today aquaculture plays a major role in global fish supply Today the global community faces financial and economic crisis climatic changes and the pressing food and nutrition needs of a growing population with finite natural resources As the world's population continues to increase over the coming decades and global living standards rise demand for fish is set to keep on growing With most wild capture fisheries already fully exploited much of that new demand will have to be met from aquaculture According to FAO estimates more than 50% of all fish for human consumption now comes from aquaculture Aquaculture is one of the most resource efficient ways to produce protein Fish come out well because in general they convert more of the feed they eat into body mass than livestock animals Salmon is the most feed intensive farmed fish to convert feed to body weight gain and protein followed by chicken Aquaculture is the controlled cultivation and harvest of aquatic organisms Most commonly grown are finfish and shellfish but other aquatic organisms are also cultivated such as seaweed microalgae frogs turtles alligators and endangered species There are many similarities between aquaculture and agriculture but there are some important differences as well Aquaculture like agriculture is necessary to meet the food demands of a growing global population with diminishing natural fisheries stocks Aquaculture and agriculture are both farming However aquaculture is farming in the water and therefore requires a different

set of knowledge skill and technology      **Fish to 2020** Christopher L. Delgado,2003 The seemingly inexhaustible oceans have proved to be finite after all Capture of wild fish have leveled off since the mid 1980s and many stocks of fish are fished so heavily that their future is threatened And yet the world s appetite for fish has continued to increase particularly as urban populations and incomes grow in developing countries Aquaculture fish farming has arrived to meet this increased demand Production of fish from aquaculture has exploded in the past 20 years and continues to expand around the world But will aquaculture be sufficient to provide affordable fish to the world over the next 20 years And what environmental and poverty problems will aquaculture face as it expands Using a state of the art computer model of global supply and demand for food and feed commodities this book projects the likely changes in the fisheries sector over the next two decades As prices for most food commodities fall fish prices are expected to rise reflecting demand for fish that outpaces the ability of the world to supply it The model shows that developing countries will consume and produce a much greater share of the world s fish in the future and trade in fisheries commodities will also increase The authors show the causes and implications of these and other changes and argue for specific actions and policies that can improve outcomes for the poor and for the environment

**Aquaculture without borders** ,2015-03-02 The European Union supported Agriculture and Nutrition Extension Project ANEP began in Bangladesh and Nepal in December 2011 and ended in November 2014 The objectives of the project were to 1 improve the food security and nutrition of smallholders by facilitating the adoption of productive and environmentally sustainable agricultural technologies that improve beneficiaries livelihoods and 2 create and develop market links to improve food and nutritional security of both rural producers and urban consumers in Bangladesh and Nepal The most significant change stories in this booklet cover many topics technology gender markets research partnerships and scaling illustrating the broad range of outcomes from Agriculture and Nutrition Extension Project ANEP The authors focus on most significant change stories relating to aquaculture A prominent theme was the power of international visits where participants learned from each other and it also highlights both the broad range of outcomes of the project and the power of exchange visits

**Improving productivity and environmental performance of aquaculture** Waite, R.,Beveridge, M.,Brummett, R.,Castine, S.,Chaiyawannakarn, N.,Kaushik, S.,Mungkung, R.,Nawapakpilai, S.,Phillips, M.,2014-09-01 Fish including finfish and shellfish are an important item in the human food basket contributing 17 percent of the global animal

based protein supply in 2010 They are an especially valuable food source in developing countries where more than 75 percent of the world's fish consumption occurs In addition to protein fish contain micronutrients and longchain omega 3 fatty acids that are essential for maternal and child health but often deficient in the diets of the poor However the global supply of wild caught fish has long peaked and is unlikely to rise again unless overexploited stocks are rehabilitated As world fish consumption continues to grow aquaculture fish farming has emerged to meet demand Already just under half of all fish that people consume come from aquaculture which is one of the world's fastest growing animal food producing sectors With the supply of wild caught fish stagnant any future increase in world fish consumption will need to be supplied by aquaculture This working paper explores the potential role of aquaculture in meeting global fish demand in 2050 finding that aquaculture production will need to more than double by midcentury The authors examine scenarios of aquaculture's growth and environmental impacts in 2050 and close with a series of recommendations for how to sustainably grow aquaculture production

**The History of Aquaculture** Colin Nash, 2010-11-23 Aquaculture has become one of the fastest growing segments of agriculture around the world but until recently many people have been unaware of its existence The practice of raising fish is centuries old with a rich history of techniques and scientific advances The History of Aquaculture traces the development of fish farming from its ancient roots to the technologically advanced methods of today The History of Aquaculture is a comprehensive history of captive fish production from its small scale prehistoric roots through to the large scale industrialized practices of today Thirteen chapters take readers chronologically through the evolution of this important discipline Chapters cover key periods of advancement and trace changes in the field from subsistence fish farming in the Middle Ages through the efforts to build global capacity for fish production to meet the needs of the world's ever growing population Informative and engaging The History of Aquaculture will broadly appeal to aquaculture scientists researchers professionals and students Special Features Comprehensive history of advances in aquaculture production from prehistoric origins to industrialized practices Written by a revered scientist with decades of experience working in the aquaculture field Engaging and informative it will broadly appeal to individuals involved in all facets of aquaculture

[World Aquaculture 2020 - A brief overview](#) Bartley, D.M., 2022-01-12 This document provides a synthesis of six regional aquaculture reviews Asia Pacific Europe Latin America and the Caribbean Near East and North Africa North America and sub Saharan Africa Global aquaculture production including aquatic plants in 2018 was 114.5 million tonnes with an estimated value of USD 263 billion The Asia Pacific region continued to be the major producer Globally aquaculture provides over 50 percent of fish for human consumption In 2018 aquaculturists were reported to farm about 622 species or species items including 387 finfishes 111 molluscs 64 crustaceans seven frogs and reptiles ten miscellaneous aquatic invertebrates and 43 aquatic plants From 2000-2018 aquaculture production in freshwater brackish water and marine water increased at a compound annual growth rate of 5.7 percent 7.7 percent and 5.2 percent respectively while total aquaculture production grew at an annual growth

rate of 5.6 percent. Global food supply and per capita consumption of fish and fish products continued to increase faster than human population growth. Aquaculture is striving to innovate in order to increase production and sustainability. Progress in biosecurity and fish health management, feed formulation and utilization, and genetic resource management are showing good but uneven progress. The aquaculture sector faces challenges including competition for land and water resources as well as external factors such as climate change, conflict, economic uncertainties, and most recently the COVID-19 pandemic. The pandemic and other stresses such as droughts and tsunamis revealed that the aquaculture industry has not engaged sufficiently in disaster preparedness. International and national mechanisms are being put in place to increase the sustainability, good governance, and social license of the sector to address these challenges. The diversity of the sector, the opportunities for good jobs, and commitments by governments to good governance will help the sector meet these challenges.

**At the Fish Farm** George Pendergast, 2016-12-15  
Farmers take care of more than just plants and land animals. Fish farms are a major food source that is often overlooked. These amazing places are found in the ocean in big ponds or even tanks that farmers keep a watchful eye on to make sure fish grow and stay healthy. Through vibrant full-color photographs and accessible text, budding readers will explore the world of fish farming: the types of fish that live in these farms and how these amazing animals are fed in their aquatic homes.

This edition of *The State of World Fisheries and Aquaculture* highlights the vital role of fisheries and aquaculture in both food and nutrition security as well as economic expansion. The sector remains a major supplier of high quality animal protein and supports the livelihoods and well-being of more than ten percent of the world's population. International trade in fish has reached new peaks as overall production has continued to rise. Yet as the document underlines, an array of problems ranging from the need for more effective governance to that of ensuring environmental sustainability threatens to undermine the sector's valuable contribution to alleviating hunger and reducing poverty. Using the latest available statistics on fisheries and aquaculture, this edition presents a global analysis of the sector's status and trends.
