Statistical Models For Optimizing Mineral Exploration:

Statistical Models for Optimizing Mineral Exploration J.G. De Geoffroy, T.K. Wignall, 2012-12-06 After the spectacular successes of the 1960s and 1970s the mineral exploration business is at a crossroads facing uncertain times in the decades ahead This situation requires a rethinking of the philosophy guiding mineral exploration if it is to emulate its recent performance The main argument of a previous volume titled *Designing Optimal Strategies for Mineral Exploration* published in 1985 by Plenum Publishing Corporation of New York is that a possible answer to the challenge facing mineral explorationists lies in the philosophy of optimization This new approach should help exploration staff make the best achievable use of the sophisticated and costly technology which is presently available for the detection of ore deposits The main emphasis of the present volume is placed on the mathematical and computational aspects of the optimization of mineral exploration The seven chapters making up the main body of the book are devoted to the description and application of various types of computerized geomathematical models which underpin the optimization of the mineral exploration sequence The topics covered include a the optimal selection of ore deposit types and regions of search as well as prospecting areas within the regions Chapters 2 3 4 6 b the designing of airborne and ground field programs for the optimal coverage of prospecting areas Chapters 2 3 4 c delineation and evaluation of exploration targets within prospecting areas by means of optimized models Chapter 5

Reliability and Statistics in Geotechnical Engineering Gregory B. Baecher, John T. Christian, 2005-08-19 Risk and reliability analysis is an area of growing importance in geotechnical engineering where many variables have to be considered Statistics reliability modeling and engineering judgement are employed together to develop risk and decision analyses for civil engineering systems The resulting engineering models are used to make probabilistic predictions which are applied to geotechnical problems Reliability

Statistics in Geotechnical Engineering comprehensively covers the subject of risk and reliability in both practical and research terms Includes extensive use of case studies Presents topics not covered elsewhere spatial variability and stochastic properties of geological materials No comparable texts available Practicing engineers will find this an essential resource as will graduates in geotechnical engineering programmes *Information Synthesis for Mineral Exploration* Guocheng Pan,DeVerle P. Harris,2000 The advent of image processing and Geographic Information Systems GIS has made a substantial impact in the fields of geology geochemistry geophysics and remote sensing Addressing this development this work provides a state of the art overview of techniques for analyzing and combining geoscience data sets for mineral exploration The nature of the book which presents fundamental concepts of mineral resources and mineral potential mapping suggests that it should be included in our Spatial Information Systems SIS series However readers of books in our Applied Geostatistics series will find it a valuable reference as well **Mineral Exploration Decisions** DeVerle P. Harris,1990-03-16 A guide to economic optimization of mineral exploration decisions with detailed information on how to analyze risk and obtain a good measure of net value Presents a unified approach to the various models used by mining companies to analyze mining prospects and evaluates and compares the models Presents typical risk scenarios and shows how to apply the economic modeling process to actual situations **Technometrics** ,1990 21st Application of Computers and Operations Research in the Mineral Industry Alfred Weiss,1989 *16th International Conference on Soft Computing Models in Industrial and Environmental Applications (SOCO 2021)* Hugo Sanjurjo González,Iker Pastor López,Pablo García Bringas,Héctor Quintián,Emilio Corchado,2021-09-22 This book of Advances in Intelligent and Soft Computing contains accepted papers presented at SOCO 2021 conference held in the beautiful and historic city of Bilbao Spain in September 2021 Soft computing represents a collection or set of computational techniques in machine learning computer science and some engineering disciplines which investigate simulate and analyze very complex issues and phenomena After a through peer review process the 16th SOCO 2021 International Program Committee selected 78 papers which are published in these conference proceedings and represents an acceptance rate of 48% In this relevant edition a special emphasis is put on the organization of special sessions Seven special sessions are organized related to relevant topics as follows applications of machine learning in computer vision soft computing applied to autonomous robots and renewable energy systems optimization modeling and control by soft computing techniques OMCS challenges and new approaches toward artificial intelligence deployments in real world scenarios time series forecasting in industrial and environmental applications TSF soft computing methods in manufacturing and management systems and applied machine learning The selection of papers was extremely rigorous in order to maintain the high quality of the conference and we would like to thank the members of the program committees for their hard work in the reviewing process This is a crucial process to the creation of a high standard conference and the SOCO conference would not exist without their help *Progress in Cement and Concrete: pt. 1.-2. Harbaugh,J.C. Davis,J. Wendebourg,1995-11-22 The petroleum industry is enduring difficult financial times because of the continuing depressed price of crude oil on the world market This has caused major corporate restructuring and reductions in staff throughout the industry Because oil exploration must now be done with fewer people under more difficult economic constraints it is essential that the most effective and efficient procedures be used Computing Risk for Oil Prospects describes how prospect risk assessment predicting the distribution of financial gains or losses that may result from the drilling of an exploration well can be done using objective procedures implemented on personal computers The procedures include analyses of historical data interpretation of geological and geophysical data and financial calculations to yield a spectrum of the possible consequences of decisions All aspects of petroleum risk assessment are covered from evaluating regional resources through delineating an individual prospect to calculation of the financial consequences of alternative decisions and their possible results The bottom lines are given both in terms of the probable volumes of oil that may be discovered and the expected monetary returns Statistical procedures are linked with computer mapping and interpretation algorithms which feed their results directly into routines for financial analysis The programs in the included library of computer programs are tailored to fit seamlessly together and are designed for ease and simplicity of operation The two diskettes supplied are IBM compatible Full information on loading is given in Appendix A Software Installation Risk 1 diskette contains data files and executables and Risk 2 diskette contains only executables The authors contend that the explorationist who develops a prospect should be involved in every facet of its analysis including risk and financial assessments This book provides the tools necessary for these tasks *Numerical Geology* Nicholas M.S. Rock,N. M. S.
