**Stabilization of Polymers and Stabilizer Processes** Norbert A. J. Platzer,1968 **Handbook of Polymer Degradation** S. Halim Hamid,2000-06-30 Covers recent advances in polymer degradation and stabilization Focuses on the basics of photo and bio degradability Delineates special and general environmental parameters such as solar irradiation temperature and agrochemical exposure Surveys plastic waste disposal strategies such as recycling incineration chemical recovery by pyrolysis and source reduction Handbook of Engineering Polymeric Materials P. Cheremisinoff,1997-07-25 Presenting practical information on new and conventional polymers and products as alternative materials and end use applications this work details technological advancements in high structure plastics and elastomers functionalized materials and their product applications The book also provides a comparison of manufacturing and processing techniques from around the world It emphasizes product characterization performance attributes and structural properties **Aging and Stabilization of Polymers** M. B. Neiman,2012-12-06 The need for a broad development of the production of polymer materials has become evident All these materials are subject to various types of aging destruction hence stabilizers which permit the storage reprocessing and use of polymer materials without any appreciable change in their properties must be introduced into them In recent years this problem of stabilizing polymers has attracted the attention of many scientists and technologists both in the USSR and abroad The scientific basis of the foreign studies will be found in a number of theoretical premises but chiefly the theory of chain reactions with unbranched chains In the Soviet Union the concepts of Academician N N Semenov on chain reactions with degenerate branches have become the starting point of theoretical studies of the stabilization and destruction of polymers Soviet scientists have developed a theory of critical concentrations of antioxidants and have shown that the processes of stabilization have a very complex chemical character The nature of the polymers themselves greatly affects these processes and consequently different stabilizers are required for polymers of different structures In addition it has been shown that the antioxidants used thus far can not only cause chain termination but can also initiate oxidation and give rise to degenerate branches Polymer Stabilization and Degradation Peter P. M.,Sarath Chandran,2014-03-14 An excellent unique and up to date reference book on polyoxymethylene its compounds and nanocomposites specifically dealing with synthesis characterization processing morphology and applications Polyoxymethylene Handbook Structure Properties Applications and Their Nanocomposites

summarizes many of the state of the art technological and research accomplishments in the area of polyoxymethylene POM It discusses in length the polymerization and manufacture of polyoxymethylene and various types of additives as well as the structure and crystallization behavior of POM and its thermal physical mechanical flame retardant chemical electrical and optical properties The environmental impact of POM is also addressed The 15 chapters in the handbook are written by prominent researchers from industry academia and government private research laboratories across the globe Because so few books have ever been published on polyoxymethylene the handbook is a very valuable reference tool that truly serves as a one stop resource for readers and users seeking solutions to both fundamental and applied problems

Plastics have developed into the most important class of packaging materials Their relative impermeability for substances from the surroundings has great influence on the shelf life and the quality of the packed goods At the same time the interaction between the contents and the various components of the packaging plays a decisive role This particular book is indispensable in the search for the optimal plastic packaging It facilitates the estimation of the influence on the goods which come from the surroundings and from the packaging The authors do not restrict themselves only to the description of the phenomena of diffusion or transport in theory but they show what they mean for practical applications Food represents the central theme as main area of application for plastic packaging It can be considered to be the model substance and the findings are to be applied to many other products and systems The main rules and regulations for food packaging of the European Community and the United States are presented in this book Furthermore the authors emphasize the testing methods for proving the mass transport and the sensory check of the quality of the products
