Vocational Mathematics William H. Dooley, 2016-10-20

From the PREFACE: The author has had during the last ten years considerable experience in organizing and conducting intermediate and secondary technical schools. During this time he has noticed the inability of the regular teachers in mathematics to give the pupils the training in commercial and rule of thumb methods of solving mathematical problems that are so necessary in everyday life. A pupil graduates from the course in mathematics without being able to commercialize or apply his mathematical knowledge in such a way as to meet the needs of trade and industry. It is to overcome this difficulty that the author has prepared this book on vocational mathematics. He does not believe in doing away with the regular course of mathematics but in supplementing it with a practical course. This course may take the place of the first year algebra and the first year geometry in vocational classes in which it is not desirable to give the traditional course in algebra and geometry. This book may be used by the regular teacher in mathematics and by the shop teacher. It can be used in the shop in teaching mathematics and in providing drill problems upon the shop work. A course based upon these points p 4 the book should be provided before pupils finish their training so that they may become skillful in

applying the principles of mathematics to the daily needs of manufacturing life In revising the manuscript the author has had the assistance of his teachers in the Lawrence Industrial School the Lowell Industrial School the Fall River Technical High School and of many other teachers practical men and manufacturing firms Valuable material has also been obtained from standard handbooks such as Kent s

INTRODUCTION In July of 1984 the first national conference on mathematics education in two year colleges was held at Menlo College The conference was funded by the Alfred P Sloan Foundation Two year colleges account for more than one

third of all undergraduate enrollments in mathematics and more than one half of all college freshmen are enrolled in two year colleges These two facts alone suggest the importance of mathematics education in two year colleges particularly to secondary schools four year colleges and universities For a variety of reasons four year colleges and universities are relatively unaware of two year colleges Arthur Cohen who was a participant at the New Directions conference warns Four year colleges and universities ignore two year colleges at their own peril Ross Taylor another conference participant encouraged two year college faculty to be ever mindful of their main source of students secondary schools and to work hard to strengthen their ties with them There are many other reasons why it was important to examine two year college mathematics from a national perspective 1 Over the last quarter century no other sector of higher education has grown so rapidly as have two year colleges Their enrollments tripled in the 60 s doubled in the 70 s and continue to increase rapidly in the 80 s x 2 Twenty five years ago two year colleges accounted for only one seventh of all undergraduate mathematics enrollments today the fraction is more than one third
