1

A transaction is requested.

2

A block that represents the transaction is created.

3

The block is sent to every node in the network.

4

Nodes validate the transaction.

5

The block is added to the existing blockchain.

6

The transaction is complete.

**Learn About Current Uses and Future Perils of Blockchain** Imagine a world where you do not go to the bank to open a savings account or withdrawal money from the ATM. You no longer go to a physical bank because they no longer exist. Instead of going somewhere and dealing with the intricacies of your account with a single person, your information is stored for everyone to see on a publicly traded list. What's more, this decentralized form of processing brings your comfort because you know that your information is being monitored and verified by dozens of people who all agree that your account is current and valid. All of this may be possible in the future by developing an understanding of the Blockchain method.
